

Languages	
English Native Speaker	
Skills	
Linux	Windows
Python	Bash
Powershell	Ansible
Gitlab CI/CD	Github Actions
Git	Grafana
Docker	Portainer
Terraform	GCP
Key Acheivements	
Enhanced Security Posture	
Addition of Static and Dynamic security scanning techniques allows for a proactive approach to securing an environment that utilizes Private Health Information and Personally Identifiable Information.	
Performance Benchmarking and Reporting	
Performance profiling across the application stack lead to 100% performance uplift.	
Automated Application Deployments	
Implement automated build and deploy system, including automated secrets management and deployment. A significant upgrade from manual & error prone copy/paste type deployments.	
Containerized Analytic Script Deployment	
Utilize docker and CI/CD platform to containerize and deploy analytic scripts to ensure consistent, rapid deployment.	
Certifications and Classes	
Securing Windows and PowerShell Automation SANS Sept 2024	
Coursera Convolutional Neural Networks in TensorFlow Coursera September 2020	
Interests	
Self-Hosting	3D Printing
Automation	Photography
Camping	Hiking
Fishing	
Education	
Colorado State University Physics 2014 - 2017 Bachelors https://colostate.edu	
De Anza Community College 2012 - 2014	
Projects	
Homelab	
Home media, files server and tech playground. Serves as a place to learn, test and experiment with new technology, both for personal growth and validation before bringing new tools to the work environment. Managed with a mixture of terraform, ansible, GitHub Actions, python and Docker.

Denver, Co • (408)903-3317 • cberg18@gmail.com • https://github.com/cberg18	
Summary	
Results-oriented infrastructure professional with expertise in automation, cloud technologies, and system administration. I consistently deliver scalable, secure, and reliable solutions by implementing Infrastructure as Code, streamlining CI/CD pipelines, and collaborating with development teams. Adept at integrating security best practices and supporting data-driven initiatives with tools like JupyterHub and HashiCorp Vault. Dedicated to staying current with emerging technologies and applying them to enhance infrastructure efficiency and innovation.	
Experience	
University of Pittsburgh Medical Center Systems Engineer	April 2021 - Current Remote
Subject Matter Expert & Technology Evaluation: Served as a Subject Matter Expert (SME) and technical evangelist, proactively researching and evaluating emerging technologies to identify opportunities for improvement and innovation within the infrastructure. Infrastructure as Code Implementation: Led the implementation of Infrastructure as Code (IaC) practices to manage and automate private cloud resources, improving consistency and scalability. CI/CD Pipeline Automation (.NET): Developed and automated build/deploy pipelines for .NET applications using PowerShell, streamlining the release process and reducing manual effort. CI/CD Pipeline Automation (Python/Data Analytics): Designed and implemented automated build/deploy pipelines for Python-based data analytics tools using Python and Docker, accelerating development and deployment cycles. Security Integration: Integrated Snyk security scanning into CI/CD pipelines and project management tools, proactively identifying and addressing vulnerabilities throughout the software development lifecycle. Application Support & Collaboration: Collaborated closely with development teams to troubleshoot application issues, enhance resilience, and optimize performance. Secrets Management: Deployed and managed HashiCorp Vault to securely store and manage secrets across production environments. Load Balancing & Application Delivery: Designed and implemented a comprehensive load balancing strategy for all applications (including data ingest), encompassing network design, load balancer configuration, and web server implementation to ensure high availability and performance. Data Science & AI Enablement: Established and maintained JupyterHub and Ollama environments to empower data analytics teams and facilitate exploration of AI applications. System Administration & Automation: Managed and maintained Linux and Windows systems, leveraging Ansible Playbooks (Linux) and PowerShell scripting (Windows) to automate administration tasks and streamline operations. Included physical host maintenance (racking, parts replacement) and virtual machine administration. Infrastructure Optimization: Enhanced infrastructure design, implementation, and maintenance across internal services, resulting in increased network performance.	
Van Horn Engineering Project Engineer	June 2017 - April 2021 Estes Park, CO
File Server Design and Implementation: Designed and implemented a file server for general office operations supporting 15+ concurrent users, ensuring reliable data management and access. Construction Project Management: Managed residential and commercial construction projects from planning to completion, coordinating with authorities to ensure smooth execution. Infrastructure Development: Developed Civil 3D standards for office-wide use, including road, sewer, water line design, grading, and landscaping. License Management: Ensured proper management of licenses required for software usage, optimizing resource allocation and availability. Excel for Project Tracking: Utilized Excel for septic field design, structural calculations, hydraulic modeling, and tracking tasks to streamline project documentation and reporting.	
Colorado State University Research Assistant	June 2016 - July 2017 Fort Collins, CO
Synthesize compounds for analysis of low temperature magnetic properties. Verify purity of compounds with X Ray Diffraction. Document procedures and results. Maintain a clean lab environment. Perform maintenance of lab equipment when necessary. Communicate results and findings to the group and Lab Director. Assist in writing proposals to larger lab groups for testing time (i.e. Oak Ridge National Lab).
